METHODS, SYSTEMS AND COMPUTER PROGRAM PRODUCTS FOR SELECTING AMONG ALERT CONDITIONS FOR RESOURCE MANAGEMENT SYSTEMS

5 ## ABSTRACT

Methods, systems, and computer program products for selecting among a plurality of alert conditions for processing by a resource management system. A priority indication is associated with at least some resources in a computer system. Resources that are associated with the alert conditions are identified. An alert

10 condition is selected from among the alert conditions based on the priority indication that is associated with the identified resources.
